Appendix B

Fencing script for *VirtualBox* designed for *RHEL/CentOS 7*

NOTE	If you're running *VirtualBox* on *Linux*, you must update the `vboxmanage` variable to point to the correct location of `VBoxManage`. Also, be careful with the indentation, this is a mandatory format for any *python* script. Each level has 4 spaces for indentation.

```
Unresolved directive in appendix-b.adoc - include::../files/fencing-stonith/fence-vb-rhel7.py[]
```
